Hash Tables

```
def strToInt(s):  
    number = ''  
    for c in s:  
        number = number + str(ord(c))  
    index = int(number)  
    return index
```

```
def hashStr(s, tableSize = 101):  
    number = ''  
    for c in s:  
        number = number + str(ord(c))  
    index = int(number)%tableSize  
    return index
```
